2014 – A YEAR OF TRANSFORMATIONAL CHANGE AND NEW WINS FOR COMMSOFT

For Commssoft, a world leader in aviation engineering and maintenance systems, 2014 was a year of transformational change which also saw a number of new organisations joining the international family of OASES users.

In addition to the introduction of a new OASES Servicedesk facility, significantly enhancing the customer experience, the company also mapped out its future software development in line with a '3 per year' Formal Release philosophy. Deliveries under Formal Release 1 have already commenced.

Formulated in response to customer feedback, this philosophy is a reflection of the closeness with which Commssoft works with its customers in order to ensure the continual improvement of OASES. To further strengthen its customer relationships, the company also introduced regular OASES Bulletins which will form the basis of a new information push strategy designed to achieve greater transparency throughout the business in 2015.

Commssoft also enhanced its OASES hosting facilities to incorporate greater redundancy and deliver increased performance. This will provide even more affordable access to smaller aviation businesses with limited IT resources.

Over the course of 2014, Commssoft welcomed a number of new OASES users. A list of our Clients can be seen by clicking [here](#).

Nick Godwin, MD of Commssoft, commented: *"2014 was a significant year for us. Some of the changes we introduced, including the new Formal Release programme, mark a new era in the history of Commssoft and OASES. We also saw the international family of OASES users growing still further and we look forward to working ever more closely with all of our customers throughout 2015 to ensure that the ongoing development of OASES is as responsive to their needs as can be."*
