## AIR EXPLORE SIGNS WITH COMMSOFT

**Commssoft, a world leader in aviation engineering and maintenance systems, is pleased to announce that AirExplore, based in Bratislava, Slovakia, has signed a 5 year contract for the use of OASES.**

Commssoft's flagship product, OASES is a 'best-of-breed' MRO IT system which offers an industry-leading technical sophistication whilst being intuitively user-friendly. AirExplore will be using OASES to support its four Boeing 737-400s and a Boeing 737-800 which provide charter flights for holiday companies as well as additional capacity for other airlines on both short and long-term contracts.

To allow for scalability, OASES is structured in a modular format and AirExplore has selected all of the following modules: Core, Airworthiness, Planning, Production, Materials, Line Maintenance Control and Warranty.

AirExplore has also opted to run OASES on standalone servers which are currently being procured and the implementation of the system is scheduled for late 2014/early 2015.

**Nick Godwin**, Commssoft Managing Director, commented: "Winning this contract is excellent news for us and further evidence that OASES really does stand apart from the competition. We're looking forward to a swift and successful implementation of the system and to a long-term collaboration with AirExplore in support of their ACMI and charter operations."

**Mr Jan Kassak**, Maintenance Director at AirExplore, added: "In connection with the increasing number of aircraft we were looking for professional program to manage the continuing airworthiness and maintenance of our fleet. We chose the OASES as the best system which meets our requirements and provides well-arranged and logical system in all areas which are necessary for the management of engineering and maintenance. I believe the OASES will meet our expectations."
